

Mixing and Application Methodology

Ready to Use

Solution Preparation Methodology

1. Check the application area where product is to be applied to ensure it is safe, the area is prepared (if applicable) and to establish the size in m².
2. Equipment must be serviceable, and tank must be clean (no residue).
3. Affix a hose directly to the product container or add solution to an application tank.

Application Methodology

1. Check weather forecast. Do not apply Ready to Use products within 6 hours of a predicted rain event.
2. Do not apply to any active waterways or areas where standing water is visible.
3. Product is pre-diluted for an application of 1L of solution per 1m² (1L = 1m²).

IMPORTANT

- In the event of a spill, stop the spill source (turn off pump/valve etc). Refer to the Safety Data Sheet. Contain the spill using a spill kit. Prevent the product from entering surface water or stormwater. Clean up the excess product with a spill kit.
- Always flush equipment with water at the end of the day to remove residual product (pumps, tanks etc).
- The Ready to Use range has been pre-diluted with water. For information on product shelf life refer to the Product Data Sheet.
